PROFESSIONAL SUMMARY

CompTIA Security+ certified Information Security Analyst with one year of enterprise security operations experience monitoring, triaging, and investigating security alerts. Experienced in SIEM and EDR monitoring, security log analysis, threat intelligence, IOC analysis, incident escalation, and vulnerability management. Hands-on experience with AWS security detection and IAM privilege escalation investigations through cybersecurity labs. Currently pursuing CompTIA CySA+ certification.

SKILLS

Security Operations: Security Alert Triage, SIEM Monitoring, EDR Investigations, Log Analysis, Incident Investigation, Threat Intelligence, IOC Analysis, Vulnerability Management, Security Documentation
SIEM & Endpoint Security: IBM QRadar, CrowdStrike Falcon
Threat Intelligence & IOC Analysis: IBM X-Force, AlienVault OTX, VirusTotal, AbuseIPDB, Cisco Intelligence
Network Monitoring: Cisco Prime, SolarWinds
Vulnerability Management: Qualys
Data Security & IAM: Varonis, Duo Security
Lab Technologies: AWS IAM, AWS CloudTrail, Amazon CloudWatch Logs, AWS Lambda, Amazon SNS, Microsoft Entra ID
Programming: Python (Learning)

WORK EXPERIENCE

Willkie Farr & Gallagher LLP | Information Security Analyst Intern | June 2025 – June 2026

- Monitored and triaged 100+ weekly security alerts across QRadar, CrowdStrike, Varonis, Duo Security, and Cisco Intelligence, documenting investigation findings and resolution steps.
- Investigated malicious domain and IP alerts from IBM X-Force and AlienVault OTX by analyzing network logs in Cisco Prime and SolarWinds, cross-referencing indicators with VirusTotal and AbuseIPDB to assess maliciousness, and escalating findings according to established procedures.
- Investigated suspicious executable downloads using CrowdStrike telemetry, sandbox analysis, and VirusTotal to assess potential malware threats and indicators of compromise.
- Analyzed Varonis alerts involving abnormal file deletions and outbound data transfers, reviewing user activity and destination information to identify potentially unauthorized activity.
- Investigated Citrix new-device sign-in alerts by reviewing historical IP activity and Duo MFA verification, escalating unconfirmed authentication activity for further investigation.
- Downloaded and reviewed monthly Qualys vulnerability scan reports across multiple departments, cleaned and organized findings in Excel, and highlighted vulnerabilities requiring remediation for senior security review.
- Contributed to an internal knowledge base article documenting vulnerability report review procedures to support consistent security operations.

PROJECTS

AWS IAM Privilege Escalation Detection & Incident Response | github.com/kfran127/aws-iam-privilege-escalation-detection

- Built an AWS IAM detection pipeline using CloudTrail, CloudWatch Logs, Python-based Lambda, and SNS to generate automated security alerts.
- Developed detection rules for privileged policy attachments, administrative group changes, and IAM policy version modifications.
- Simulated an AdministratorAccess policy attachment, validated a live CRITICAL email alert, and manually removed privileges while documenting incident response.

SecureBank IAM Lab | github.com/kfran127/securebank-iam-lab

- Simulated a regulated banking IAM environment in Microsoft Entra ID, implementing access controls aligned to compliance requirements.
- Configured 5 Conditional Access policies including phishing-resistant MFA enforcement for administrative roles.
- Configured 3 automated access reviews with assigned reviewers and recurring cadences, supporting continuous compliance monitoring.
